A/UX 3.0 and Telnet Receiving Two Mail Notices (4/93)

Article Created: 12 April 1993

TOPIC -----

I have been receiving two mail notices whenever I connect to A/UX 3.0 with telnet.

DISCUSSION -----

We looked at the A/UX 3.0 source code and this is what we found:

- The first "You have mail" message, is generated by the process remlogin, which is called by the in.telnetd process when a telnet login is performed.
- The second "You have mail" message is displayed by the initialization scripts during the login sequence. Both /etc/profile and /etc/cshrc check for mail.
