## Apple Adjustable Keyboard & Compatibility with A/UX 3.x (3/94)

Article Created: 4 March 1994

TOPIC -----

Is the Apple Adjustable Keyboard compatible with A/UX 3.x?

DISCUSSION -----

No, the Apple Adjustable Keyboard does not work completely with A/UX 3.0 or 3.0.1.

Because the CommToolbox tool(s) are built into the kernal with the keyboard IDs, some of the keys, such as arrow keys and '~', key do not respond with the same ANSI escape sequences as they do in CommandShell.

The problem has been reported and is known to A/UX engineering.
