## A/UX: ftp Autologin (5/95)

Article Created: 4 May 1995

TOPIC -----------------------------------------------------------

The A/UX man pages provide instructions for setting up the ftp Autologin process
by creating a .netrc file. However, I can't seem to get this file to work.

DISCUSSION ------------------------------------------------------

The documentation provides a description for entries in the .netrc file, but
fails to note the order of execution. For the file to work, the machine name of
the remote system needs to be the first entry. This would be followed by login,
password, and then any macdef entries for ftp macros.
