A/UX: AppleShare Server Support (6/93)

Article Created: 29 August 1989

Article Reviewed/Updated: 6 June 1993

TOPIC -----

Is it possible to run the AppleShare File Server under A/UX, so that the Macintosh II running it can act as a server and as a UNIX user workstation at the same time?

DISCUSSION -----

The answer depends on what software versions you're running.

A/UX 1.1 did not support the AppleShare 2.0 Server software. However, you can turn an A/UX system into an "AppleShare" server through the use of AUFS from Columbia University or uShare from Information Presentation Technologies. Either of these products runs on under A/UX, turning it into a server supporting AppleShare clients. Also, they do not require a dedicated system.

If you're have the Apple Work Server (AWS) 95, running A/UX 3.0.1 you can. You can also run FileShare under System 7.x.
