TOPIC ---

I tried to mount a remote file system and got the error:

    mount: <hostname> server not responding: RPC_PROG_NOT_REGISTERD

DISCUSSION --

Check to see that the /etc/initd daemon is running.

1) Log on to the system as "root".

2) Enter the line:

       ps -ef | grep mount

    The output should look like this:

       root 317   107   0 Apr 25 ?   0:05 rpc.mountd

If you did not get this output, do these steps:

1) Enter the line:

       grep inetd /etc/inittab

    You should see this output:

       net9:2:respawn:/etc/inetd

    The inetd daemon starts the rpc.mountd daemon. If the output does not
    match the above output, edit the file /etc/inittab and change that line

```
    so that it does.

2) Shut the system down into single-user mode;

    # sync; sync
    # init 1.

3) Bring the system back up into multi-user mode

    # init 2
```
