A/UX: Quantum Pro-80 Requires Different Formatting (9/94)

Article Created: 10 July 1990

Article Reviewed/Updated: 21 September 1994

TOPIC -----

I have been unsuccessful in installing A/UX 1.1.1 onto Quantum Pro-80 drives using the Apple HD Setup utility. I heard that there is a ROM difference between the Quantum drives I have and the ones Apple uses. My drives have Quantum ROMs, while Apple's have an Apple ROM. Have you heard of problems with Quantum drives?

DISCUSSION -----

According to Quantum technical support, the Pro-80 drive is not compatible with the Quantum Q280 drive which is used in the Apple HD 80SC. They use their own ROM. The Apple HD Setup software cannot be used to initialize the Quantum Pro-80 drive.

To install A/UX onto a Quantum Pro-80 drive, find a third-party disk formatter to format and partition it for A/UX. A good example is SilverLining from La Cie Ltd.
