Apple IIGS: 25-Inch Monitor Not Recommended

Article Created: 14 May 1991

TOPIC -----

Is there a way to hook-up an Apple IIGS to a 25-inch monitor?

DISCUSSION -----

Because the Apple IIGS only supports up to 640 x 200 pixel resolution (with no optional video cards available) we don't recommend adding a large screen monitor.

All you would accomplish in any case is magnifying the screen -- no desktop space would be added. Also, the enlarged screen would look grainy.
