## Aristotle Menu Setup Problem: Check Access Privileges (11/94)

Article Created: 26 February 1991

Article Reviewed/Updated: 07 November 1994

TOPIC -----

We are having problems with menu access using Aristotle. The server is a Macintosh SE/30 4/80, running the latest System software (GS/OS 5.0.2) and the proper Apple II Setup.

The menu setup that we are using lets two of the teachers have set their own menus up so that they can go into student menu Administration with a menu choice of their own. One teacher doesn't see that choice; he can only see his two classes. The other can't see one class, but sees administration.

What could be wrong in the setup?

DISCUSSION -----

The typical issue that causes this type of problem relates to folder access privileges.

The first teacher's access privileges are probably not set for access to the Menu Management program's folder, while the set for access to his two classes' folders. The second teacher's privileges seem to be set for access to the Menu Management's folder, while the class folder's access is probably not permitted. This has been the only way we have been able to duplicate the situation you describe.
