TOPIC -----

I have an AppleShare network with Apple II workstations and a Macintosh file server. My problem is with Menu Management in Aristotle. After I make changes in menu.m and I try to save changes, I get the error "File already open." Even after repeated tries, I still get this error and must quit without saving my changes.

DISCUSSION -----

The problem may be with the Access Privileges in the Administrator's ESP folder.

Aristotle's menu management program creates folders named ESP that are stored within individual users' folders on the server's startup volume. In order for Aristotle to work correctly, access privileges must be set up in a certain way:

- 1) Open AppleShare Admin.
 - 2) Display the list of folders.
 - 3) Open the Users folder.
 - 4) Open the appropriate user's folder.
 - 5) Display the access privileges on the ESP folder.
 - 6) Ensure that all boxes in Access Privileges are checked EXCEPT "Make Changes: Everyone".
 - 7) Make sure that Teacher appears in the Group box.
