## APT Routers Support Device Security Across Zones

This article last reviewed: 9 October 1990

TOPIC -----

How can I get device security across AppleTalk zones?

DISCUSSION -----

APT has announced an update to their AppleTalk routers. They now support device security across zones. Users can hide a LaserWriter, file server, or shared modem from anyone not in their zone.

Users in different zones can be allowed different sets of access to different devices. For example, Zone A may have no access to your LaserWriter but still have access to a file server, while Zone B has access to all LaserWriters but not AppleTalk ImageWriters or NetModems.

APT routers connect multiple LocalTalk, Ethernet, WAN, and Serial networks, and they support AppleTalk Phase 2.
