EtherTalk: When To Use the Network CDEV

Article Created: 14 June 1991

Article Last Reviewed:

Article Last Updated:

TOPIC -----

I just upgraded my Macintosh to System 6.0.7 and suddenly my Network 2.0 System file no longer works. Where can I find another copy of Network 2.0?

DISCUSSION -----

When you install the EtherTalk or other alternative network driver, the Network CDEV is installed. The CDEV is not necessary unless you are on a network other than LocalTalk. If you are on a non-LocalTalk network, running the Network Products Installer to install EtherTalk will also install the CDEV.
