AWS 95: Sharing Other UNIX Data Over AppleShare Pro (4/95)

Article Created: 7 June 1993

Article Reviewed/Updated: 19 April 1995

TOPIC -----

Can an Apple Workgroup Server (AWS) 95 be used to share data on other UNIX systems with Mac OS systems?

DISCUSSION -----

Yes, the AWS 95 can NFS mount the data from the other UNIX systems, and then the NFS mount points can be shared with AppleShare Pro. However, this is not a recommended configuration. The server software was optimized for performance using AppleShare services only.
