## AWS 95: How Many NFS Mount Points (6/93)

Article Created: 11 June 1993

TOPIC -----

How many NFS mounts to one Apple Workgroup Server (AWS) 95 would you recommend as the limit? What impact does the NFS keep-alives have on the AWS 95 performance?

DISCUSSION -----

The number of NFS mounts is dependent on kernel memory. Also the number of NFS mounts is restricted by the total maximum size of the mount table. It is configurable via 'kconfig' with the NMOUNT parameter, the default of NMOUNT is 32. The impact of these mount points on the server will depend on how the mount points are created (soft, hard, bg, time out values, NFS cache settings, retry values, retransmission values, and so on).
