## MacDFT: Use Shielded Twisted-pair or Type 3 Cabling

Article Created: 20 August 1991

Article Last Updated:

TOPIC -----

I'm running MacDFT over the Apple TokenTalk NB Card, and I'm getting a "no cable connected" message.

DISCUSSION -----

You're using unshielded twisted-pair cabling, which is generating a signal too weak for MacDFT to pick up. There are two alternatives:

- Switch to shielded twisted-pair cabling.
- Use Type 3 cabling.
