PATHWORKS: How to Create a System 6.0.7 Installer Disk

This article last reviewed: 15 February 1991

TOPIC -----

How can one create a PATHWORKS for Macintosh Installer Disk with System Software 6.0.7?

DISCUSSION -----

The PATHWORKS for Macintosh Installer Disk is just like a normal System Software 6.0.7 startup disk with AppleShare Workstation software, so you can access to a VAXshare file server. All the PATHWORKS for Macintosh software is located on the VAXshare file server. The PATHWORKS Installer Disk works when your Macintosh is connected to the Digital network through LocalTalk and a router, or through an Apple EtherTalk NB card. EtherTalk software must be installed on this Installer Disk for this use.
