MacDFT v1.1: Doesn't Support IBM Entry Assist Function

This article last reviewed: 10 July 1990

TOPIC ---

Turning Document mode on enable's IBM's Entry Assist function. This feature
works with several IBM host editors to provide limited local-formatting, entry,
and edit control.

The key sequence that initiates this on a 3278 Model 2 terminal is "Alt-Blank"
(on the MacDFT keyboard layout this is "Alt-CR POS"). Also, I have seen this
function implemented on a PS/2 Model 60 using IRMA DFT.

I need to know if I can imitiate this function. However, I cannot get into
Document mode, because I am already showing "Alt-CR POS" in the key position
that produces this function on a 3278 terminal.

DISCUSSION --

MacDFT 1.1 does not support IBM's Entry Assist function. If this functionality
is needed, we suggest investigating DCA's MacIrma product, because it is likely
to provide features similar to those found in their DOS products.
