Token Ring: Macintosh SE Card Available in Scandanavia

Article Created: 4 March 1990

Article Reviewed/Updated: 27 July 1993

TOPIC -----

Is anyone marketing a Token Ring board for the Macintosh SE in Scandanavia?

DISCUSSION -----

EuroComm, Inc. has the international marketing rights for MacRing SE from Asante Technologies, Inc. (formerly h-three) in North Carolina and uses Nova International as the Scandinavian distributor. MacRing SE is used for:

1) Macintosh SE to Macintosh over a Token Ring link

Shipped with each board is a completely TokenTalk-compatible driver allowing full access to AppleTalk over a Token Ring link at 4Mbps. Thus, any software designed to run over AppleTalk can be used, and the Token Ring link becomes transparent. It has been tested with Microsoft Mail, Word, Excel, TOPS 2.1, and Timbuktu.

2) IBM PC Access to AppleShare File Server

An IBM PC can access a Macintosh set up as an AppleShare File Server with AppleShare PC 2.0.

3) Macintosh Access to IBM File Servers

Miramar Systems' MacLAN lets the MacRing SE user access any IBM file server, like Novell, PCLAN, and 3COM.

4) 3270 support so that a MacRing SE user can access IBM mainframes using the same Token Ring-to-mainframe connections as PCs (for example, IBM 3174, IBM 37X5 T1C, and other Token Ring gateways).

To locate a vendor's address and phone numbers, use the vendor name as a search string.
