Macintosh Display Card 8•24 GC: Memory Configurations

Article Created: 13 August 1991

Article Last Reviewed: 12 June 1992

Article Last Updated:

TOPIC -----

What memory configurations are possible on the Macintosh Display Card 8•24 GC? Do both memory slots have to be filled? What are the minimum and maximum memory per slot?

DISCUSSION -----

The card can be upgraded to 2MB with Apple's expansion kit, or up to 8MB with kits available from third-party vendors. Both slots have to be filled with the same density SIMMs:

2MB = 1MB SIMM X2

8MB = 4MB SIMM X2
