## Macintosh Display Card 8•24 GC: Acceleration Slows Some Apps

Article Created: 13 August 1991  
Article Last Reviewed: 15 June 1992  
Article Last Updated:

### TOPIC -----

My Color Studio graphics software runs slower with the Macintosh Display Card 8•24 GC's acceleration turned on than with it off.

### DISCUSSION -----

Many graphics programs have been optimized at the hardware level, bypassing the QuickDraw routines. In such cases, turning on software acceleration causes the slowdown you're encountering. We suggest you contact the software vendor for upgrade and compatibility information.

When the accelerator is turned off, the Macintosh Display Card 8•24 GC behaves just like a Macintosh Display Card 8•24.
