Macintosh: How To Add On Serial Ports (10/94)

Article Created: 8 September 1988

Article Reviewed/Updated: 12 October 1994

TOPIC -----

How can I add serial ports to my NuBus equipped Macintosh?

DISCUSSION -----

To add serial ports to your Macintosh equipped with one or more open NuBus slots, both Apple Computer and Creative Solutions offer cards for the Macintosh.

- The Apple Serial NB card adds four serial ports which can be configured to operate at different speeds. The card can be installed in a Macintosh serving as a gateway to other networks, such as SNA with the SDLC protocol and X.25 with the HDLC protocol. This card is designed to be a platform for various serial communications applications (initially, MacAPPC and MacX25).
- The Creative Solutions Hustler and Hurdler HQS offer 2 and 4 additional serial ports respectively for use with modems or other serial devices.

For more information, search under "Serial NB card" or "Creative Solutions".

Article Change History:

12 Oct 1994 - Revised Serial NB card info, updated serial port vendor.
