Macintosh IIX: ROM SIMM Size And Position

Article Created: 16 November 1988
Article Last Reviewed: 20 July 1992
Article Last Updated:

TOPIC -----

Where is the ROM SIMM in the Macintosh IIX located? And how large is it?

DISCUSSION -----

The new ROM SIMM in the Macintosh IIX is located 1/2 inch to the left of the RAM SIMMs when looking at the machine from the front. The ROM SIMM is about 3/8" taller than DIP-mounted SIMMs.

Because of its height, the new ROM SIMM may cause problems with the installation of third-party, large capacity, full-height disk drives.

If DIP-mounted SIMMs currently cause installation problems with the drives in question, then the ROM SIMM will make this problem more pronounced.
