## Mac LC 580 & Pwr Mac 5200/75 LC: Optional Video-Out Card (10/95)

Article Created: 1 June 1995

Article Reviewed/Updated: 2 October 1995

TOPIC -----

I want to connect an external monitor to my Macintosh LC 580 or Power Macintosh 5200/75 LC, how do I do this?

DISCUSSION -----

Both the Macintosh LC 580 and Power Macintosh 5200/75 LC can use the optional Apple External Video Connector (M4099LL/A) to provide a video-out source. The Apple External Video Connector plugs into the main logic board, and allows you to connect to a second Macintosh compatible 14-inch display. The external video source mirrors the built-in display. If you need to project the image to a TV or LCD panel, then you need the Apple Presentation System.

The Apple External Video Connector does not use the communications or PDS slot, leaving these slots open for other expansion.

Article Change History:

02 Oct 1995 - Added part number for video card.

28 Jun 1995 - Added Power Macintosh 5200/75 LC.
