

Macintosh SE, SE/30: Possible Combinations of Internal Drives

Article Created: 18 September 1989 Article Last Reviewed: 7 August 1992 Article Last Updated: 22 August 1991

TOPIC -----

What are the possible combinations for the internal drives on a Macintosh SE and SE/30?

DISCUSSION -----

The Macintosh SE chassis is capable of holding two 3.5-inch storage devices. The Macintosh SE and Macintosh SE/30 logic boards use the same amount of space in the Macintosh SE chassis. The Macintosh SE/30 logic board has only one internal floppy-drive connector. Based on this information, it is possible to have these combinations of hardware installed in the Macintosh SE chassis:

- 1) Macintosh SE logic board; one 800K floppy drive.
- 2) Macintosh SE logic board; one Apple SuperDrive (formerly Apple FDHD).
- 3) Macintosh SE logic board; two 800K floppy drives.
- 4) Macintosh SE logic board; two Apple SuperDrives.
- 5) Macintosh SE logic board; one 800K floppy drive, one 3.5-inch hard drive.
- 6) Macintosh SE logic board; one Apple SuperDrive, one 3.5-inch hard drive.
- 7) Macintosh SE/30 logic board; one 800K floppy drive.
- 8) Macintosh SE/30 logic board; one 800K floppy drive, one 3.5-inch hard drive.
- 9) Macintosh SE/30 logic board; one Apple SuperDrive.
- 10) Macintosh SE/30 logic board; one Apple SuperDrive, one 3.5-inch hard drive.
