Macintosh SE/30: SCSI Access Time and Transfer Rate

Article Created: 11 April 1989

Article Change History

09/16/92 - REVIEWED

- For technical accuracy.

TOPIC -----

What is the SCSI access time and transfer rate for the Macintosh SE/30?

DISCUSSION -----

The access time for the drives in the Macintosh SE/30 averages less than 30 ms. The data transfer rate is the same as the Macintosh II and is very close to 935K bps.
