Performa 405: Running 256 Colors (7/93)

Article Created: 21 July 1993

TOPIC -----

I bought game software and tried to run it on my Performa 405, but I got a message saying it could only run with 256 colors. How can I get around this?

DISCUSSION -----

The Performa 405 only handles 16 colors. If you want to run an application which will only work in 256 colors, you need to upgrade your VRAM (Video RAM).

To upgrade your VRAM, you need to contact a local Apple Service Provider. If you need help in locating a service provider, you can call Apple's dealer locator at (800) 538-9696.
