## **Pwr Macintosh 7300, 8600,9600: Support EDO Memory? (2/97)**

Article Created: 7 February 1997

Article Reviewed/Updated: 24 February 1997

TOPIC -----

I heard that the Power Macintosh 7300, 8600, and 9600 series computers ship with EDO memory installed. Does this mean these computers support EDO memory?

DISCUSSION -----

Although the Power Macintosh 7300, 8600, and 9600 series computers do ship with EDO (Extended Data Out) memory installed, these computers are not EDO compatible.

The memory controller of these computers does not support EDO memory. Instead, the EDO memory in these computers functions as FPM (Fast Paged Mode) memory.
