Power Macintosh: Using With Authorware Software (5/94)

Article Created: 25 May 1994

TOPIC -----

I am using a Power Macintosh and a Macintosh Quadra 700 with Authorware 2.0.1 software to create and run presentations. The portion of the presentation created on the Q700 wouldn't run on the Power Macintosh and vice versa. What is causing this problem?

DISCUSSION -----

The version of Authorware that works on the Power Macintosh is 2.0.1E instead of 2.0.1. The software vendor Macromedia indicates that if you recompile the project with the E version it will work across different Macintosh platforms.
