Power Macintosh 5200: Video Playback Issue with MPEG (11/95)

Article Created: 15 November 1995

TOPIC -----

I have a Power Macintosh 5200 series computer with an MPEG card. However, when I try to use the MPEG card to play video, I either don't see any video at all or the computer locks up. What could be causing this?

DISCUSSION -----

Some of the Power Macintosh 5200 series computers with 8-bit sound have an issue with the Apple MPEG Card. The solution is to replace the MPEG card.

If you are experiencing difficulty using the MPEG card to play video, contact an Apple-authorized service provider or the Apple Assistance Center (800-SOS-APPL) for additional assistance or service.
