## Macintosh Plus: Control Panel Startup Device Not Available

Article Created: 11 October 1989

Article Last Reviewed: 29 May 1992

Article Last Updated: 29 May 1992

### TOPIC -----

The Startup Device does not appear in the Control Panel on Macintosh Plus systems. This happens with System 4.3 and with System 6 and later. And using System 7, there is no Startup Disk control panel available either. I have two hard disks and want to choose which one should start up first.

### DISCUSSION -----

That behavior is correct. On Macintosh Plus or earlier Macintoshes, the Startup Device module of the Control Panel does not appear while running System 6.0.X or earlier, nor does the Startup Disk control panel appear while running System 7 or later. The SCSI firmware is different on the Macintosh Plus and does not allow for the same flexibility that later Macintoshes provide. The SCSI device with the highest SCSI number will be the first device to boot (note that an internal hard drive will take SCSI ID 0, while the Macintosh itself will take SCSI ID 7).

For more information, see chapter 18 of "Inside Macintosh Volume V," specifically page 325.
