AppleShare Print Server: Extra Line Feeds on ImageWriter II

Article Created: 17 August 1989

Article Change History

12/10/92 - UPDATED

- To include AppleShare 3.0.1 Print Server information.

TOPIC -----

I'm printing to an ImageWriter II with AppleShare Print Server. With spooling and the sheetfeeder attached, I get additional line feeds at the top of the page. If I bypass spooling, it prints fine.

DISCUSSION -----

With AppleShare Print Server versions 2.0 and 3.0, the print server supplied incorrect information to the client about the printer configuration. This caused the paper to advance before the start of the page and again at the end of the page.

AppleShare Print Server version 3.0.1 fixes the problem.
