## AppleShare Print Server: Using a Macintosh 512Ke as a Server

This article last reviewed: 27 February 1990

TOPIC -----

Will a Macintosh 512Ke with 1MB RAM support five printers as an AppleShare Print Server? If not five, how many will it support? The manual refers only to Macintosh 512K configurations.

DISCUSSION -----

A Macintosh system with 1MB RAM can capture up to five printers or two if an AppleShare File Server is running on the same machine.

A 1MB Macintosh 512Ke is not mentioned in the AppleShare Print Server manual, because Apple did not make or sell 1MB Macintosh 512Ke systems.
