AppleShare: Devices Not Users, Only 25 Users Can Log On

This article last reviewed: 28 September 1988

AppleShare does not consider a device as a "user", because devices do not log on, and are transparent to the server. AppleShare also allows only 25 true users to log on to a 1 megabyte file server.

If a 26th user logs on to an AppleShare file server, the user receives this message:

"This File server will not allow any additional users to log on. Try again later."
