Article Last Updated:

TOPIC -----

Does SNA•ps 1.1 printing let me specify the orientation and font for host jobs?

DISCUSSION -----

The user manual for SNA•ps 3287 tells you how to print data that is wider than the page to a LaserWriter. Use the Landscape option in the printing dialogue at 76 percent to allow printing 132 columns by 66 rows. This is the normal 3287 printer paper size.

The "Use custom formatting" option in the Session menu lets you to choose font, size, lines/inch, and other parameters to get the output format as close as possible to your ideal.

Print preview, in the Session menu, lets you preview your output in a separate window.

The font that ships with SNA•ps 3287, called Noiro, is designed to mimic the look of IBM fonts; the custom formatting and preview options should enable you to diverge from the IBM look.
