AICK and Previously Installed Netscape Navigator (9/96)

Article Created: 18 September 1996

TOPIC -----

I just installed the Apple Internet Connection Kit (AICK) on my Macintosh which is connected to a local area network (LAN). Netscape was already installed and was working correctly. However, after installing AICK I get this message when I launch Netscape, "There is an error in the PPP preferences file." I removed the PPP preference and Netscape preference files and I still get this message, what is wrong?

DISCUSSION -----

The TCP/IP or MacTCP control panel has become configured for a PPP connection. You need to switch it to either a EtherTalk, Ethernet, or LocalTalk connection as is appropriate.
