### TOPIC -----

Can I use File sharing with PCs?

### DISCUSSION -----

MS-DOS-based computers can access folders and files shared by Macintosh computers by using the AppleShare PC software available from Farallon Computing. This software provides the same capabilities that Macintosh computers have when connecting to shared folders with the AppleShare workstation software.

The Farallon product is PhoneNET Talk software, formerly AppleShare PC. With it, any MS-DOS or Windows personal computer can share networked printers, file servers that support AppleTalk Filing Protocol (AFP), and AppleTalk network applications over an AppleTalk network.

For more information, search for Farallon Computing.
