Article Last Updated:

TOPIC -----

I am trying to install QuickMail on my Macintosh Quadra running System 7 using QuickMail Installer 2.2.3, but the installation fails. I was using QuickMail on another Macintosh running System 7 before I moved up to the Macintosh Quadra.

DISCUSSION -----

You need to use QuickMail Installer 2.5 or later. QuickMail Installer 2.2.3 is not compatible with System 7.

Notes from CE Software:

- In many instances, users running system software version 6.X used QuickMail Installer 2.2.3. When they upgraded to System 7, the QuickMail INITs and CDEVs were moved into the correct locations. However, this is not the case when you try to install QuickMail, using the Installer 2.2.3, on a Macintosh already running System 7.
- Workstations running QuickMail 2.5 or later are incompatible with servers running versions earlier than 2.5.

To locate a vendor's address and phone numbers, search on the vendor's name.
