System 7: File Sharing and Multi-user Access to a Document

Article Created: 5 March 1991

Article Change History

09/04/92 - REVIEWED

- For technical accuracy.

TOPIC -----

Does File sharing let several people access one document simultaneously?

DISCUSSION -----

Support for multi-user access to a document depends on the application. All the major Macintosh database programs support multiple-user access to a shared data file and many other Macintosh programs are AppleShare-aware to the point that they also support multi-user access to a single document. Some applications, like Microsoft Word, let a user open a shared document as "read-only." This means that other users can also open the same document as read-only.
