## System 4.0/Finder 5.4: Alarm Setting Won't Stay On (9/95)

Article Created: 29 September 1987

Article Reviewed/Updated: 19 September 1995

TOPIC -----

Every time I turn off my Mac Plus I lose the alarm clock setting. I am running System 4.0. Why does this happen?

DISCUSSION -----

In a Macintosh Plus with System 4.0 and Finder 5.4, a set alarm clock functions properly as long as system power stays on. If the system is powered down and back up again, a quick check of the alarm clock reveals that the switch to the alarm clock is turned off.

This does not occur under the previous system software, System 3.2 and Finder 5.3. You will need to upgrade to a more current version of the system software or revert to the previous version to correct this problem.
