Macintosh System Software 6.0.7: Compatibility Report (6/95)

Article Created: 6 February 1991

Article Reviewed/Updated: 6 June 1995

TOPIC -----

The following is a list of third-party software applications that Apple tested with system software 6.0.7. This list should be used as a snapshot of compatibility as of the day of 6.0.7 introduction.

DISCUSSION -----

This report does not cover all Macintosh application software, it covers only those applications that Apple reviewed. For more detailed information on compatibility of an application and system software 6.0.7, contact the developer or publisher of that product.

Apple did not test every feature of the application. Instead, each application was run through a series of common functions: launch, open a simple document, open DAs, cut/paste, and print).

This report reflects compatibility information on the version number of the application listed, and in some instances does not reflect the most currently available version of a particular application. This list is not intended as an endorsement nor advertisement of any product. This list is meant to provide you with the most current information regarding compatibility of system 6.0.7.

Note:

Testing was done on the Macintosh Classic, Macintosh LC, Macintosh IIsi, Macintosh Plus, Macintosh SE, Macintosh SE/30, Macintosh IICx, Macintosh IIX, Macintosh IIci, Macintosh IIfx, and Macintosh Portable personal computers using system software 6.0.7. Ratings for all applications indicate performance of the application running on released CPUs and released system software.

The following products passed our compatibility tests. If any additional comments were needed, then they are mentioned in the "COMMENTS" field.
