System 6.0: Duplicating Easy Access Causes Mac II, SE To Hang

This article last reviewed: 16 November 1988

Duplicating the "Easy Access" file in the System folder on a Macintosh SE or Macintosh II causes it to hang when the first keystroke is entered after a restart.

With System Software 6.0 or later, the INITs in invisible files are not loaded or run by the System.

There is currently no solution for this problem.
