Macintosh System Software: Sharing a Hard Disk

This article last reviewed: 29 February 1989

If you are installing System software on a hard disk that will be shared by different Macintosh models (for instance, both a Macintosh II and a Macintosh Plus), we suggest installing the System software as if the drive is going to be used on a Macintosh II.

A Macintosh Plus ignores the information for a Macintosh II, while providing all the files and resources a Macintosh II will need.

(NOTE: Do not use the minimum Installer scripts for this purpose.)
