## OmniPage: Incompatible with Macintosh Portable

This article last reviewed: 22 May 1990

TOPIC -----

I have a Macintosh Portable and want to know if OmniPage scanning software works on the system. It wasn't listed in the compatibility list in a recent Apple mailing.

Also, will a half-page or hand-held scanner work with the Macintosh Portable? Is there a list of scanners and scanner software that work with the Macintosh Portable?

DISCUSSION -----

OmniPage requires a 68020-based system with 4MB RAM to run. With these requirements, OmniPage will not work on the Macintosh Portable. We have yet to contact CTA, publishers of TextPert, but their package is listed as running on any Macintosh with a minimum of 1MB RAM.

We don't know of a list of compatible scanners and scanner software. However, Logitech (ScanMan) and Thunderware (LightningScan) indicate that their products work fine with the Macintosh Portable.

For more details, search the Technical Info library under "CTA."
