Macintosh: APL terminal emulator

This article last reviewed: 13 May 1987

STSC's APL*PLUS for the Macintosh (formerly sold as PortAPL) has a built-in APL terminal emulator for an APL workstation. In addition to having an APL terminal emulator built-in, APL*PLUS, a comprehensive APL system in its own right, also includes a LaserWriter APL font which can be used for printing documents with APL characters in them.

There is also a version that runs on the Macintosh SE.

For more information, search on "STSC".
