Easel-Type Programs are Available for Macintosh

This article last reviewed: 5 July 1990

TOPIC -----

I need to find out about a product called Easel, currently available for MS-DOS systems. Is there anything equivalent for the Macintosh?

DISCUSSION -----

Easel is a front-end package that allows you to build a better interface to what may perhaps, from a GUI standpoint, be a more complex or inelegant system interface.

Proven programs for the Macintosh that perform similar functions include HyperCard and MitemView.
