FileMaker Pro: Workaround for Creating AppleLinks

Article Created: 13 May 1991

Article Last Updated:

TOPIC -----

Is there a way to create documents in Claris FileMaker Pro that are formatted correctly for my AppleLink 6.x Out Basket?

DISCUSSION -----

There is no way to create AppleLink Out Basket formatted files from within FileMaker Pro.

One possible workaround: have FileMaker Pro create a text file with all of the necessary information -- To:, cc:, Subject:, and Memo. A HyperCard stack could then read in the FileMaker Pro text file, parse the information into the necessary fields, and create a file formatted for the AppleLink Out Basket.
