Power Macintosh: Using America OnLine Software (10/94)

Article Created: 07 July 1994

Article Reviewed/Updated: 13 October 1994

TOPIC -----

This article discusses using America Online software with the Power Macintosh.

DISCUSSION -----

America Online (AOL) software version 2.1 (or later) works with Power Macintosh computers if you increase the suggested memory size for the America Online application to 2 megabytes. Also, make sure you have 2 megabytes of RAM available. If this fails to work, turn off the Modern Memory Manager in the Memory control panel.

Anyone with an earlier version of the AOL software needs to upgrade to version 2.1.
