Apple HD Backup 1.1: 800K InvisHDMMainBo3b Invisible File

This article last reviewed: 22 June 1989

TOPIC -----

Why does HD Backup version 1.1 create an 800K invisible file called "InvisHDMMainBo3b". Do you have any idea why it should be so large?

DISCUSSION -----

The "InvisHDMMainBo3b" invisible file contains only 4 bytes of data and should be no larger than 2K. The file stores the date of the last backup.

Neither Tech Comm nor the programmer of HD Backup knows why the file would grow to 800K. If anyone in the field has experienced this problem and knows the cause, please AppleLink TECH.COMM.
