Mirror Backup Solutions for the Macintosh

This article last reviewed: 8 June 1990

TOPIC -----

I heard that there is a mirror-backup solution for the Macintosh called "Reflections" that is sold by Profyle Computers, Ltd.

DISCUSSION -----

Profyle creates mirror systems, not just the software. They have complete software and hardware systems for doing mirror backups. The drives range from 100MB to 1.2GB. Currently, Profyle has no U.S. distribution. For more details, search the Technical Info library under "Profyle" and "Natural Intelligence."

A similar type of backup utility was recently announced. Natural Intelligence publishes a product called "Shadow", which does automatic backups.

Shadow periodically copies the documents that have changed since they were last backed up. Shadow can back up onto any kind of disk, network server, or Finder-mountable tape drive.
