## Macintosh PC Exchange: PC Icon on a Hard Disk

Article Created: 4 December 1992

TOPIC -----

When I place the PC file onto the hard disk, I'm unable to assign a creator/type. The file always shows up as a PC icon and never takes on the icon of the application it's assigned to.

DISCUSSION -----

The assignment of the suffix to a creator/type applies to files that are on MS-DOS floppy disks only. Macintosh PC Exchange's creator/type selector won't access files you mount via a network, removable hard disk, or optical disk.
