## Newton Connection Kit for Windows: Using a Logitech Mouse (4/94)

Article Created: 12 April 1994

TOPIC -----

This article describes compatibility problems between the Logitech Mouse and the Newton Connection Kit for Windows.

DISCUSSION -----

When using the Newton Connection for Windows with a Logitech FirstMouse, the mouse cursor, or arrow, will travel across the screen in random direction without user interaction.

This is usually caused by a misconfigured Windows mouse driver. Change the configuration of the mouse using the Windows Setup program from "Microsoft or IBM PS/2 mouse" to "Logitech Mouse".
